ENAI

#Network Engineer

Our team of engineers has a skillset that challenges them on a daily basis to ensure the accessibility of the network and the hosted solutions of ENAI and its customers and to ensure that they meet the set performance requirements.

#EXPECTATIONS

They are involved in designing and setting up networks. Day-to-day work consists of making changes such as configuring up to installing and replacing network components. They function as second-line support for resolving incidents and structural problems in the network. In addition to these activities, there is also strong innovation in the network department, with a focus on automation and the ability to offer new services.

#STRENGTHS

- ✓ Togetherness
- ✓ Systematically and methodically achieve high quality results
- ✓ Security by design
- ✓ Good in coding & communicating
- ✓ Successfully explain complex material
- ✓ Opening doors rather than creating obstacles
- ✓ Commitment to the organisation, the people and the results
- ✓ Eager to learn
- ✓ 24/7 mentality

#QUALITIES

- ✓ HBO education towards computer science or electronics
- ✓ Minimum 2-3 years of experience with hosting / ISP networks
- ✓ Knowledge of system components (servers, network components and PCs)
- ✓ Knowledge of Unix and Linux or Windows Server
- ✓ Fluency in Dutch and English, both orally and in writing
- ✓ CCNA certification
- ✓ Experience with the common network and routing protocols
