

Project engineer

ENAI

A safe and comfortable life

For professional service providers, we are happy to be the knowledge partner in continuity with solutions without having to worry about anything. We ensure that our customers can fully focus on their services. And in the background, we like to ensure that all information & systems are always available in a secure manner.

We supply the ENAI service platform for managed services.

Our solutions are currently often used by professional service providers in the security industry.

We always see opportunities in connecting, interpreting and/or presenting information sources, making it possible for professional service providers to act not only reactively, but also proactively on valuable information.

Things will get better with you! Will you join our team?

We are looking for project engineers who can take the lead in all phases of an IT project, from start to implementation.

- Together with 4 other engineers, you will work in an informal organization to inventory, realize, accept and deliver customer projects.
- In this role you are responsible for implementing the ENAI software solutions at customers.
- In collaboration with the project team, you know how to create the right conditions within the project to implement the result successfully and to the customer's satisfaction. This while maintaining the reliability and safety of the system.
- In the starting phase you make an inventory of the customer situation, an action plan including hourly budget and lead time.
- During the project, you keep stakeholders informed of progress and report any delays or problems in a timely manner.
- You take the lead for the delivery, keep an overview and know how to take care of the delivery down to the last detail.
- After delivery, you hand it over to your colleagues at Continuity & Management.

#Education & experience

- MBO ICT level 4 / HBO work and thinking level
- At least 2 years of work experience
- Experience with project-based work in an IT environment is an advantage.

#Soft skills

- Communicative
